

Value of Using Envize™ with Relativity

You don't need to leave Relativity when you can add Envize™, the best analytics for Relativity Review.

Envize is a robust data analytics framework that brings uniquely scalable and flexible machine learning based solutions to discovery document review. Envize provides that most advanced review analytics available in our industry today - and it can connect directly into Relativity to make everything easy for you!

Just a few years ago, eDiscovery review analytics promised to change your world. But it didn't happen. The systems were too slow, too complicated, too soiled and most of all - too expensive. Now, Envize finally delivers for you on the promise of faster, easier, connected and inexpensive eDiscovery review. Envize doesn't just leverage the latest in Predictive Analytics technology, and it does so automatically. Fast, painless training meets automated systems means you don't have to wait for re-indexing new batches. That means your review gets done faster.

“Legility came through for us by suggesting that we use Technology Assisted Review (TAR) workflow(s); We were able to review a fraction of the overall data corpus. We would recommend Legility on any case, no matter the size of complexity.
