Legility

Using Legility Legal Hold Repository to Address Data Growth and Tackle Risk

Highlights

Legility was able to provide an **efficient and cost-effective solution** for a construction company with a massive data footprint. The solution allowed data to be purged on a **consistent, process-driven schedule.**

Challenge

With more than 8,800 employees, a large U.S. construction aggregates producer anticipated employee data and legal risk mitigation issues. The company already had a massive data footprint that was growing exponentially.

> " **With Legility's LHR, the organization saved time, money, and energy while reducing its legal risk exposure and meeting its discovery and litigation obligations.**

Data storage was expensive, and locating relevant data when legal matters required production took unreasonable amounts of time to find. The already-constrained legal and IT teams felt their infrastructure and budgets being stressed.

In discussions with Legility's consulting team, the company's leadership saw an opportunity to proactively address data growth and tackle potential legal risk exposure. Data needed to be purged on a consistent, process-driven schedule, but the company needed a partner to help.

Solution

Ultimately, the company's goal was to eliminate redundant data with no continuing organizational significance, and implement a solution that would allow the legal team to make informed litigation decisions while complying with discovery obligations in a timely and effective manner.

The company decided on Legility's Legal Hold Repository (LHR), a uniquely proactive solution compared to traditional reactive legacy solutions in the marketplace. Legility's LHR was chosen because of its Information Governance-based process driven by industry-leading technology. With its deep-indexing, meta-tagging and de-duplication functionality features to manage custodial data, LHR could drive cost-efficient, single-use storage with powerful searching capabilities for rapid response by the legal team.

Results

All of the company's goals were met with Legility's LHR. Time, money and energy was saved and the legal risk exposure was reduced, all while meeting applicable discovery and litigation holds obligations. With Legility's LHR, the company instituted effective retention guiding policies that drove their data management, which was (and still is) run by a progressive technology solution allowing for a tiered, multi-phase approach. The company has found its balance between retaining the data that they reasonably anticipate needing with a cost-efficient, trusted tool that the firm can rely on for legal responsibility.

Legility Legal Hold Repository

Designed with big data in mind, Legility's Legal Hold Repository (LHR) is an agile, robust and innovative solution to enterprise information governance and eDiscovery challenges.

We ensure on-demand access to information and reporting by maintaining all data subject to litigation, investigative or regulatory inquiry in on SOC 2 secure environment. All material is de-duplicated and indexed, resulting in searchable single-instance storage environment.

This flexible solution also allows for pairing with multiple eDiscovery platforms. Our Legal Hold Repository services can be bundled with any of our eDiscovery services, or stand alone with your existing review solutions.

Let's change the business of legal together.
